

Research says:*

The *more* and *earlier* a parent is involved in their child's education:

1. Higher grades and graduation rates
2. Better school attendance
3. A better feeling about themselves

Family-School involvement has more impact on student success than household income.

What families have said:

“My home visitor helps me with finding resources for the entire family and I really appreciate it. The help with setting good homework habits was great. It turned out to be a great program. And to think I thought twice about participating!”

“FSC has been wonderful in helping us with the educational process. They provided many helpful suggestions on how to manage my son's behavior...I found it comforting to have someone there to answer my questions and help us determine what steps we needed to take.”
